

RUGVED GANESH BHOR

Cybersecurity & Information Security Student | AI / Full-Stack Developer

Pune, Maharashtra, India | +91-9673152629 | rugved4327@gmail.com | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Computer Science Engineering student specializing in Cybersecurity and Information Security with hands-on experience in secure software development, full-stack applications, AI/ML, and computer vision. Skilled in Python, JavaScript, the MERN stack, Linux, TensorFlow, LangGraph, network and application security, and Microsoft Power Platform. Focused on building secure, scalable systems across web, AI, and cybersecurity.

TECHNICAL SKILLS

Programming: Python, JavaScript, C++, Java

Cybersecurity: Linux, Network Security, TCP/IP, DNS, HTTP/HTTPS, OWASP Top 10, JWT, RBAC, bcrypt, AES, SHA-256, Nmap, Wireshark, Vulnerability Assessment, Digital Forensics

Web & Data: React.js, Node.js, Express.js, MongoDB, REST APIs, HTML5, CSS3, Tailwind CSS, SQL, Vector Search

AI/ML & Computer Vision: TensorFlow, Keras, Scikit-Learn, LangGraph, NLP, LLM Orchestration, OpenCV, Deep Learning, CNNs, ResNet, MobileNet

Tools & Platforms: Git, Docker, Google Colab, Power Apps, Power Automate, Power BI, SharePoint

EXPERIENCE

Power Apps Developer Intern | Sankalp ERP Solutions | Pune, Maharashtra

May 2026 - Present

- Contributed to CampusKey, a centralized admission management portal built with Power Apps, Power Automate, SharePoint, and Power BI.
- Developed modules for student profiles, admissions, document uploads, course enrollment, and academic records while supporting role-based interfaces for Admin, Manager, Counselor, and Finance users.
- Integrated SharePoint Online and Power Automate workflows for lead assignment, validation, document management, reporting, and audit-oriented process automation.

AI Laboratory Projects - Research Assistant / Project Lead | Pune, India

Academic

- Conducted Python-based ML experiments covering hyperparameter tuning, model evaluation, interpretability, and reproducible experimentation.
- Implemented and compared image-recognition architectures, documenting model behavior and computational trade-offs for future iterations.

SELECTED PROJECTS

AskMyNotes - AI Knowledge Retrieval System | MERN, LangGraph, Vector Search, NLP

- Built an AI-powered second-brain platform for semantic note retrieval and natural-language queries, with REST APIs for document indexing and retrieval.

SecureShare | MERN, JWT, AES

- Built an encrypted file-sharing platform with JWT authentication, bcrypt password hashing, RBAC, protected REST APIs, secure downloads, and audit logging.

Web Vulnerability Scanner | Python, Requests, Nmap

- Developed a scanner for HTTP security headers, HTTPS validation, and port scanning, producing structured reports of common web security misconfigurations.

Road Sign Recognition | TensorFlow, OpenCV

- Built a real-time road-sign detection and classification system and achieved 95% classification accuracy using data augmentation to handle environmental noise and motion blur.

CNN-Based Image Classification & Digit Recognition | TensorFlow, Keras

- Designed custom CNN architectures for multi-class image datasets and MNIST, analyzing model depth versus computational latency for potential mobile deployment.

Cyber Utility Suite | Python

- Developed CLI utilities including a port scanner, password strength analyzer, file integrity checker, and SHA-256 hash generator.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Expected 2029

Specialization: Cybersecurity & Information Security | **Relevant Coursework:** Data Structures & Algorithms, Computer Networks, Operating Systems, DBMS, Cybersecurity, Information Security, Artificial Intelligence, Probability & Statistics, Linear Algebra
